Everyday Privacy Scenarios

Six choices students face, with the privacy-safe answer

Six everyday situations. Each has three choices and one privacy-safe answer with the reason.

Scenario 1: Flashlight app permissions

A flashlight app asks for contacts, location and microphone access.

	Choice	
A	Allow all so it works	
B	Deny all; a torch needs none of them	✔ Privacy-safe choice
C	Allow only location	

Why: Ask only for what the purpose needs (data minimisation). A torch needs no personal data.

Scenario 2: Aadhaar on a Google Form

A club form asks for your full Aadhaar number just to join a workshop.

	Choice	
A	Type it, the club is trusted	
B	Ask why it is needed and offer your college ID instead	✔ Privacy-safe choice
C	Post it in the club group	

Why: Collect only what is necessary. Ask for the purpose and give the least sensitive ID that works.

Scenario 3: Pre-ticked fest box

Fest registration has a pre-ticked box: “Send me offers from partner brands.”

	Choice	
A	Leave it ticked	
B	Untick it, then register	✔ Privacy-safe choice
C	Skip the fest	

Why: Consent needs a clear action from you. Pre-ticked marketing boxes are not good consent.

Scenario 4: Marksheet in a chatbot

You want an AI chatbot to explain your marksheet and are about to upload the photo.

	Choice	
A	Upload the full photo	
B	Type a made-up sample with a fake name and number	✔ Privacy-safe choice
C	Upload it but hide your face	

Why: Never put real personal data in prompts. A made-up sample gets you the same help.

Scenario 5: Under-18 cousin's game

Your 15-year-old cousin signs up for a game that tracks behaviour and shows targeted ads.

	Choice	
A	Let them accept the terms	
B	Choose a child-safe setting or app and involve a parent	✔ Privacy-safe choice
C	Use a fake birth year	

Why: Under-18 users need verifiable parental consent, and tracking and targeted ads aimed at children are not allowed (Section 9).

Scenario 6: Old app keeps messaging

An app you no longer use keeps sending messages and you want your data removed.

	Choice	
A	Uninstall and forget it	
B	Withdraw consent and request erasure; escalate to the Data Protection Board if ignored	✔ Privacy-safe choice
C	Delete your SIM	

Why: Uninstalling does not delete data on the company's servers. Use your rights under Sections 6, 12 and 13.
